

Ideas for Project "J"

1. The app arranges the payment factors, as a single group, underneath one working period.
2. The app prompts the user to type in the following payment factors: location, department, invoice, amount, due date, receiving date, net amount, net taxable, and sales tax.
3. The user can select either “open” or “closed” for the factor, status.
4. The user can either enter the amount or press “N/A” for the factors, net taxable and net status.
5. The user can click “Register” to send the client payment information to the database.
6. The payment factors are arranged in a 4 by 3 sequence.
7. The app is named “P4N Payments”.
8. The app contains a search bar. When the user clicks on that bar, the user can search for a payment based on the location, department, and date.
9. When the user traces the specific payment, only that specific payment shows up.
10. The default shows all the payments that the user entered.
11. The subtitles should be displayed in the following order: working period, location, department, invoice, invoice issue date, amount, due date, receiving date, status, net amount, net taxable, sales tax.
12. Once a payment is registered, the payment information should be under the subtitles. The payment information must be in the identical arrangement as the subtitles.
13. Each payment is arranged in a single row.
14. The app contains a section titled, “Payment Registration,” where the managers find a box with the prompts, asking the user to type in the payment information.
15. The app screen, when opened, should display the heading, “P4N Payments,” should be displayed on the top and at the center. To the left of the heading, the manager’s username

should be displayed. Below the heading on the right side of the screen should be the search bar. Below the heading on the left side of the screen should be the “Payment Registration” button. Below the search bar and the “Payment Registration” button should be a list of all the saved payments that the managers entered.

16. If the manager clicks on the “edit” button on a payment row, the manager should be able to go back to that specific payment to adjust its information.
17. The app has a log-in page, which prompts the managers to enter their username and password. The enabled username and passwords to access this site via separate accounts are the following: Joseph & p4nets123!, Katherine & p4nets234!, Paul & p4nets345!, Jaime & p4nets123!
18. When the pointer of the computer hovers on the username display, the computer displays a box, titled “log out.” If the user clicks on the “log out” box, the user goes back to the login page.
19. If the user enter his/her corresponding username and password, then the computer will direct the user to the main page, which contains the search bar, payment registration button, username, and recorded payments (if any entered).

Possible Outcomes of P4N Payments

1. The managers of P4N Payments have the ability to trace any particularly specified payment of the clients if they need to review it.
2. The managers of P4N Payments have the ability to clarify the errors of each payment of the clients.
3. The managers of P4N Payments can ensure that the payments are both accurate and up-to-date.
4. The managers of P4N Payments do not have to manually share their payment recordings with each other.
5. The app contains a chat box in a separate tab where the managers can communicate with each other on the status of the payments of the clients.
6. The app contains an Ask Gemini section to allow the managers to double check their calculations on the factors for the clients' payments.
